

New and unique ultra-low dose 3D imaging

DIGITAL Dental now offers the ProMax 3D family from Planmeca, which incorporates the new Ultra Low Dose protocol offering superior 3D images for doses less than a traditional panoramic unit.

ProMax 3D units are superb for orthodontic cases requiring localisation of unerupted or impacted teeth and their effects on the neighbouring teeth, detection of facial asymmetries, defining orthodontic landmarks, post-operative and follow-up images in maxillo-facial surgery.

Ultra-low dose 3D CBCT units provide a vast amount of additional anatomical information compared with a 2D image at a similar radiation dose with highly focused, noise-free, high-resolution 3D volumes for endodontic and periodontal imaging and new multiple volumes for implant and surgical planning.

For more information, visit www.digitaldental.co.uk or call 0800 756 5642.

'Superb handling' with composite materials from 3M Espe

DR Sheraz Aleem from the Dental Artistry Academy recently organised a hands-on training course on anterior composites for GDPs, led by internationally renowned Dr Federico Ferraris and sponsored by 3M Espe.

"I have been using composite materials such as the Filtek Z500 Universal Restorative from 3M Espe for many years.

"While I would say that the quality of anterior composites placed is affected more by the skill of the practitioner, working with high-quality materials makes a good clinical outcome easier to achieve.

"The handling of the 3M composite materials is the best of all materials I have used – it's superb. The effects that can be achieved with the composite with regards to the translucency and the opalescence are also fantastic."

For more information, call 0845 602 5094 or visit www.3Mespe.co.uk.

3M ESPE

Repetitive routines prone to error

MARKET-leading Dürr Dental has colour-coded its preparations with a special four-colour system to provide users with greater clarity. It

conveniently classifies over 30 products into their area of application: green for surfaces, blue for instruments, yellow for special areas and suction units, and pink for skin and hands.

Dürr Dental concentrate for instrument disinfection ID 213 or drill disinfection ID 220, for example, are coded with the colour blue.

Pink is for hand disinfection and features products such as the rub-in preparation HD 410. Green is the Dürr System Hygiene colour for disinfection of contaminated surfaces.

Disinfection and cleaning products in the fourth, yellow-coded speciality area, remove pathogens from suction units.

Find out more at www.duerrdental.de.

Perfect partners

SUCTION machines and Orotol plus have been inseparable for 50 years now, ensuring clinics are provided with full power and long suction-unit service life.

Dürr Dental suction machines allow patients to be treated in a supine position and help ensure the smooth running of a clinic.

A faulty suction machine can bring a clinic to a standstill, but the performance of about half of all suction units is compromised by deposits and clogging.

Since 1965, Orotol plus has been the safe and effective solution for suction units. Ease of use, broad spectrum efficacy and high material compatibility distinguish Orotol plus. It is the best option for extending the service life of suction units.

Further information can be found at www.duerrdental.com.

Difficult diagnosis? Refer to EndoCare

AT EndoCare we excel at diagnosing and treating dental pain in all its forms. Our team of highly trained endodontists are all experts in their field and absolutely committed to relieving pain and saving teeth. In fact in the last 10 years, we've saved over 10,000 teeth from extraction!

So if you have a difficult diagnosis, or need help with any aspect of root canal treatment, give our expert team a call today. We welcome contact from all referring practices and are ready and willing to assist you in any way we can.
