

SET TO IT

Impregum Penta from 3M ESPE is a true polyether impression material.

It allows practitioners to take impressions for enhanced results thanks to its detailed reproduction, achieved with the material's level of hydrophilicity, dimensional stability and precision fit.

Impregum displays snap-set behaviour, which means it rapidly transitions from the unset to the set state, producing accurate impressions.

Impregum Penta has a palatable minty flavour and can be used for crown and bridge impressions, inlay and onlay impressions, functional

impressions and implant impressions.

3M, ESPE, Penta and Impregum are trademarks of the 3M Company.

STERILISATION POUCHES

PeelVue+ are sterilisation pouches that help practices comply with the HTM01-05 regulations. They provide an ideal adjunct for sterilisation and sterile storage in a range of colours and sizes.

The pouches are for presenting germ-free equipment and instruments to the patient, who will be assured of commitment to infection control.

Convenient and easy to open even with gloves, PeelVue+ are designed with external and internal process indicators built directly into each pouch. PeelVue+ also includes Closure

Validators that guide to the correct closure of the pouch.

Safe to use in any autoclave, and made with medical grade non-recycled paper.

COSMETIC ORTHODONTICS

The European Society of Aesthetic Orthodontics (ESAO) offers general dental practitioners the opportunity to enhance their knowledge and experience of aesthetically focused orthodontics.

Nadim Majid, the communications director of the ESAO states: "At the moment there are a lot of companies that provide orthodontics and aesthetically limited orthodontics and until

recently there didn't seem to be an umbrella organisation.

"Our organisation aims to bring impartial training and education to those dentists who want to build upon their core knowledge of aesthetic orthodontics. The ESAO supports ethical dentists who wish to offer minimally invasive treatments."
