

Comprehensive root canal treatment

QED is the sole UK distributor for the Superendo B&L-beta cordless backfill obturation delivery device and Superendo B&L-alpha II cordless vertical compaction device.

The Superendo B&L-beta promises fast and easy delivery of warm obturation material for the endodontic backfill technique, facilitating rapid obturation of even the most difficult root canals more completely, in less time, and with less patient discomfort. Cordless and compact, it features variable temperature settings, which allow practitioners to control the flow characteristics of the material; a rechargeable lithium ion battery, which will support hours of use from a single charge; and a choice of

needle size (23g and 25g), with a 360° swivel for improved access.

The Superendo B&L-alpha II is the latest addition to the cordless range of endodontic equipment available from the company. Supplied with three tips, the device features multiple temperature settings (150°C, 180°C, 200°C and 230°C) to accommodate both gutta percha and resilon, with a quick heating tip that reaches temperature within 10 seconds. It incorporates a rechargeable lithium-ion battery, which facilitates multiple uses on a single charge and allows the operator to complete many cases without the need to recharge. It also comes with a tip, so it is immediately

ready to use, with a full range of optional tips available separately.

Providing specialist dental care for your endodontic patients

ENDOCARE says it doesn't just aim to meet patients' expectations, it aims to surpass them. The company believes that every patient is unique and deserves to be treated with the best level of care.

The company's practices are located across London and are equipped with the latest equipment designed to meet the exacting needs of modern endodontic practice. Not only are your patients promised the best care in a warm and friendly environment, but they will also receive treatment from recognised experts in their field. The team of qualified specialist endodontists (pictured) are committed to diagnosing and treating dental pain, and are widely published in the professional press.

The company prides itself on forming close working relationships with all of its referring practices, and aims to become an integral part of your practice team.

Oral surgery solutions

FILHOL Dental says its products are designed to be faster, easier and safer to use. Made of pure (99.8 per cent) titanium, the products are bio-compatible and compatible with all dental materials.

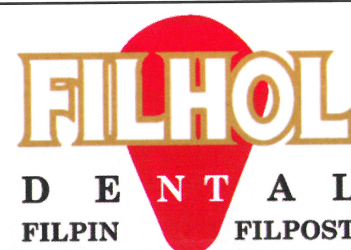

The Filpin dentine retention pin can be easily bent to suit the restoration, without breaking it or the tooth. The pin's thread design maximises retention strength, without causing internal stresses.

The Filpost root canal post reportedly preserves more healthy tooth structure and is stronger in use due to its passive "interlocking" system. It can be customised to suit the canal, without risk of fracture, enabling insertion of multiple posts into converging canals.

No drilling is required during placement due to the special Universal Groover, which minimises dentine removal and creates a passive interlock that strengthens retention.

In addition, the Filpin Pin Bender can be used with Filpin for added precision and accuracy.
