

Take control during endodontic treatment

BIEN-AIR has developed the Optima MX2 INT, described as the most efficient dental micromotor on the market.

Thanks to Smart Logic technology, the micromotor's control unit offers ultimate regulation of the power required, linearly and without vibration, ensuring you are in control of the speed, torque and reversal at all times. With Easy-Nav philosophy, the unit is intuitive and adapts to most dental chairs. The control unit offers 10 pre-programmed modes for your main restorative work and 10 sequences for your endodontic work, all at the press of a button.

The control unit has been developed with

your endodontic work in mind. The company says you can perform your root treatments with complete peace of mind, as the unit has been designed to reduce the risk of NiTi instrument breakage to an absolute minimum with the precise auto reverse function.

The all-in-one system promises to make your life easier. In most cases, two contra-angle handpieces are sufficient to carry out the vast majority of dentistry.

The system drives the new LED MX 2 Micromotor. MX 2 is shorter and lighter than its predecessor and, with its shortened nose, it accepts the company's new Micro-Series contra-angles, as well as standard contra-

angles. The combination of both the MX 2 and Micro-Series is a reduction in the overall length by 30 per cent and a weight reduction of 23 per cent.

Canal preparation

RECIPROC, from Quality Endodontic Distributors Ltd (QED), is not just a new file, but also a new concept in canal preparation. It can help you save hundreds, if not thousands, of pounds per year.

Described as the first one-file system where no glide path is required (in most cases), it works with a reciprocating action, which is driven through the VDW Silver Reciproc motor, which can also be used with conventional rotary file systems.

The system is made from M-wire NiTi, which is stronger and more flexible than standard NiTi. There are three files in the range, which all have a regressive taper, which means that the apical portion of the file has the greatest taper. The file sizes are R25 (08/25), R40 (06/40) and R50 (05/50). Each of the files is available in lengths 21mm, 25mm and 31mm. The system also has matching gutta-percha and paper points.

Supplied sterile, in blister packs, the system is exclusive to QED.

Difficult diagnosis

ENDOCARE says it excels at diagnosing and treating dental pain in all of its forms. Its team of highly trained endodontists are all described as experts in their field and are committed to relieving pain and saving teeth. In fact, in the last 10 years, the team has saved more than 10,000 teeth from extraction.

The company's philosophy is simple: it aims to provide high quality endodontic treatments in a warm and caring environment where patients' needs are always the main concern.

So, if you have a difficult diagnosis, or need help with any aspect of root canal treatment, you are advised to contact the company. The team welcomes contact from all referring practices and is ready and willing to assist you in any way it can. According to the company, it particularly excels at treating anxious patients and other challenging issues, such as hot pulps, microsurgery and re-treatments.

For more information, please visit the company's website or circle the reader enquiry number.
