INDIVIDUAL SOLUTION

The R7 International from Anthos presents the dentist module with integrated instrumentation, and easy movement for the users operating position. It will accommodate left and right-handed operators, with comfort for patients.

The R7 features an adjustable pneumatic headrest that allows the operator to adjust the patient position, whilst the triple axis LED operating light gives the optimal view of the oral cavity.

The R7 offers a range of delivery systems and optional extras to create exactly the right treatment centre to meet individual clinical needs and

budget. It comes complete with a five-year parts warranty.

RADIATION PROTECTION

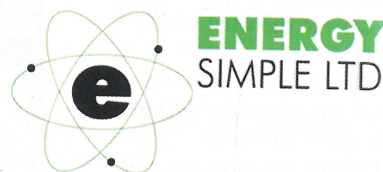

Energy Simple provides radiation protection advice, solutions and training to dental professionals and their staff.

The key radiation protection concerns of any practice are the safety of employees and patients as well as knowing that any X-ray equipment is correctly maintained and any legislative requirements are met.

Energy Simple takes care of client's concerns by providing a safe simple solution. One of its expert team will visit the premises and undertake an inspection audit of the client's

compliance with all relevant regulations, providing a report of findings on completion. He or she will then ensure any non-compliances are dealt with and resolved in a helpful and timely fashion.

WORK EFFICIENTLY

Yusef Moazzam Ali from Ramsgate, Kent, refurbished his surgery with the Heka Dental Unic treatment centre.

He said: "Heka Dental chairs were recommended by Eclipse Dental, and I decided to visit them at their factory. Heka both design and manufacture all their own electronic components.

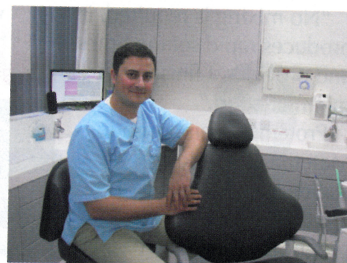

"I was impressed by the build-quality of every chair, which are mostly made of cast aluminium, stainless sheet and milled stainless steel. There are no plastic bits that could break. The chair is comfortable with its memory foam seat.

"I find myself working

efficiently and in a more comfortable position than in the past."

For more information call 01763 849990 or visit www.heka-dental.com.

TEAMWORK

The London Smile Clinic has recently purchased an orthopantomogram (OPG) machine. This technology will enhance its range of expertise and level of accuracy.

They are inviting other practitioners to make use of this exceptional equipment by referring their patients to the clinic.

The advanced, digital radiography produces panoramic; wide view X-rays to provide broad coverage of the facial bones and teeth in a very short amount of time. OPG images are particularly beneficial to ensure the precision of restorative work,

orthodontics, implants and endodontic treatment.
