

## It all starts with value

ENSURE you offer your patients the best deals by making the most of the promotions in the latest Value Plus Flyer from The Dental Directory.

Now with more savings offering incredible value like never before, the Value Plus Flyer includes tonnes of great promotions from leading brands across the industry, with savings on products from 3M Espe, Alkapharm, Dentsply, Septodont, Voco, Sybron Endo, Schulke+, Kerr, NSK, W&H and much more.

All orders placed before 5pm receive free next day delivery, with no minimum order required, meaning the great value just got even better!

To find out how your practice can see the benefits, look out for the Value Plus Flyer this November.

Call 0800 585 586 or visit [www.dental-directory.co.uk](http://www.dental-directory.co.uk).

## One tool does it all

3M Espe offers a two-step, single-use finishing and polishing system that allows anterior and posterior restorations to be polished with just one tool.

**3M ESPE**

The spiral shape of Sof-Lex Spiral finishing and polishing wheels can reach crevices, fissures and all contours of the tooth, removing the need for points, cups, discs and brushes. The ability to use all parts of the spiral wheel – side, top, bottom and edge – is what makes it effective from any angle.

The fine finishing wheel (beige) smoothes and removes scratches in restorations and prepares the surface for high gloss polishing. The superfine polishing wheel (white) quickly achieves a life-like lustre.

3M Espe is the UK's number one in finishing and polishing.

Call 0845 602 5094 or visit [www.3Mespe.co.uk](http://www.3Mespe.co.uk).

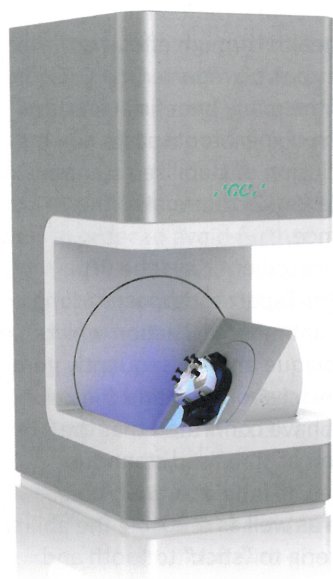

## GC UK's new Aadva Scanner

THE GC Aadva high-end lab scanner is fully automated and uses the latest high-end dual camera system with blue LED structured light in combination with GC's implant scan-technology to provide the highest accuracy and extremely fast scanning of objects.

Thanks to the use of the unique GC Scan flags, the capture of implant positions and orientations with the highest accuracy is achievable within seconds. The result is a high-precision virtual model and the perfect base for the Aadva CAD design of extremely complex geometries such as bars and implant-supported, screw-retained frameworks.

Aadva meets any clinical case from crowns to implant-supported frameworks.

For further information, call 01908 218999.

## Supporting confidence and growth

YUOVOV research conducted in June 2014 found that consumer confidence is now at its highest level since 2007,

creating increased opportunities for dental practices, but stability is a key factor required to support confidence and growth. DPAS' practice-branded dental plans can provide this stability, creating patient loyalty and consistent revenue streams, while helping to build the practice's own brand and re-engage with those patients that have delayed appointments, persuading them that regular care is in their best interests.

DPAS' 18 years' experience is invaluable to practices launching plans for the first time, or changing plan providers. Its team training, marketing consultancy and patient recruitment support ensures that patient take-up is maximised.

your dental plans

## Quieter, smaller, lighter and 50% more efficient

DÜRR Dental's new Tyscor suction machines use radial compressors instead of side channel blowers. Users save between 35%-50% in energy costs because the new suction units are networkable and can be used with Tyscor Pulse software, allowing the user to conveniently set their suction machine to one of three different suction levels from the convenience of a PC.

An integrated rotational speed monitor detects contamination or flooding of the separation unit and, if necessary, switches off the machine before a defect can occur.

The quiet Tyscor V dry systems can be quickly and easily converted to Tyscor V wet systems and their compact size makes them easy for engineers to install.
