

## TAKE YOUR PICK

New from The Dental Directory: Doctor's Brushpicks are toothpicks for a healthy smile.

Using Doctor's Brushpicks everyday will produce a notable improvement in patient's oral health in only two weeks.

Each Brushpick offers seven discrete ways to clean teeth better with improved Pylalene for longer lasting bristles, it extends between teeth gently and easily, brushes away debris, stimulates the gums, will not harm dental and bridge work, manoeuvres and is easy to hold and safely scrapes away plaque.

Brushpicks promote

periodontal health, help in the fight against gingivitis and are available in four convenient varieties.

## PROFESSIONAL TRAINING

Dentisan has announced the launch of a one-day course designed to educate the dental team about every aspect of infection prevention and control. The course is being held once a month at Dentisan's Centre for Decontamination Education (CDE) in Derby.

This course combines theoretical learning with hands-on practical application of decontamination procedures. It provides successful delegates with a City and Guilds accredited qualification. Delegates registered with the GDC can claim up to 5.5 hours of

verifiable core CPD in infection control.

The next course dates for 2015 are as January 8, February 5, March 5 and April 2.

## VENEER CEMENTATION

DMG's Vitique veneer cementation system is designed to make it easier to cement composite and ceramic veneers, and also more predictable and reliable. It incorporates everything needed to cement high quality ceramic veneers, regardless of the clinician's experience, including five easy to follow step-by-step user guides.

Vitique offers try-in pastes which are indistinguishable from their matching resin cements because of their 100 per cent correspondence, this ensures predictable and aesthetic final results, reliable and long-term cementation

without micro-leakage or damage to the veneer caused by excess pressure, excellent handling and opportunities for variation during shade selection.

## A LOYAL FOLLOWING

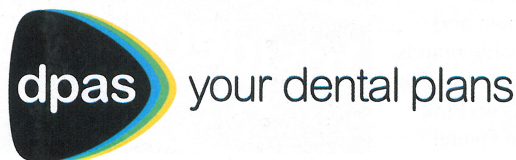

Creating a regular income stream is essential to ensure the economic success of a practice.

Dental plans are a way to promote patient loyalty, build patient trust and ensure a solid foundation for practice growth. By choosing a DPAS practice-branded plan dentists can keep control of their practice's brand and promote their services rather than being overshadowed

by a nationally branded identity.

It's easy for patients to switch practices or postpone appointments, but a practice branded dental plan encourages regular attendance, giving practices the opportunity to build long-lasting and trusted relationships with their patients.

## MINIMAL INTERVENTION

MI dentistry is now an evidence-based approach to caries management whereby dental disease is controlled by the dental practitioner. GC Europe put into place an MI structure and formed the MI Advisory Board from prominent European academia. This involved working together in numerous workshops organised by GC Europe, to devise the 'Minimum Intervention Treatment Plan' (MITP) which is the first ever systematic and scientific evidence-based practice guide to forward-looking caries management.

GC has put together a free pack including samples of

Fuji Triage, product brochure, Dentonauts pen, surgery poster, patient leaflets and patient motivators to further enhance the Fuji Triage message.
