

THE PERSONAL TOUCH

Bethan Holding, senior nurse at Station Dental Practice in Leyland says: "We have been using The Dental Directory for a few months now. Competitive pricing and the personal touch was a big attraction for us.

"We buy all our consumables from The Dental Directory and we aim to source as much as possible from them in the future.

"I order using the website, which remembers our prices and favourites, for quick and easy ordering, saving us time and money. Delivery is pretty quick and the quality has been great so far. I would absolutely recommend The Dental

Directory to other practices."

A NATURAL CHOICE

Visit GC UK's Facebook page to receive a free sample of MI Varnish and learn more about this product.

MI Varnish enhances enamel acid resistance and boosts salivary fluoride levels. Calcium and phosphate boost the benefits of the fluoride by making it more bio-available. Recaldent (CPP-ACP), a milk-derived protein, makes MI Varnish a natural choice for patients.

MI Varnish has a smooth, creamy texture; exhibits no colour change; is patient friendly with a choice of fresh

strawberry or mint flavours and has a thin film thickness which is comfortable to patients, even with multiple applications.

NATURAL FOR LIFE

EndoCare has a talented group of experienced endodontists ready to assist with all aspects of root canal treatment.

Endocare believes in the benefits of endodontic therapy over extraction and is passionate about ensuring patients have their natural teeth for life.

When referring to Endocare, patients are treated in state of the art facilities. The expert team of endodontists are all widely published, and are dedicated to root canal treatment and the diagnosis and

alleviation of dental pain.

For complete peace of mind Endocare will always communicate with dentists at each stage of a patient's journey, and will return them pain free, confident and happy with the quality of treatment they have received.

ACCURATE IMPRESSIONS

Sundip Kalirai, principal dentist of Harrow Weald Dental Practice, recently started using Impregum Penta Impression Material from 3M Espe. He said, "We wanted a reliable impression material and preferred a monophasic system. Our lab had also requested we use Impregum for implant impressions, based on their previous experience of materials.

"The main benefit of the product is its ease of use. It is easy for the dental nurses to prepare, while creating little mess.

"The material sets very hard and becomes stable

quickly after mixing, hence providing the accurate impressions we need for implant patients."

For more information call 0845 602 5094 or visit www.3Mespe.co.uk

PROVEN EFFICACY

The extensive use of alcohol as a cleaner and disinfectant in dentistry is mainly due to its relatively low cost and quick drying properties. However, rapid evaporation leads to reduction in effectiveness during the wiping process; alcohol also has a proven incompatibility with certain surfaces and is known to fix proteins to surfaces.

Biocleanse Ultra, from Dentisan, is an all in one, pH neutral, alcohol free cleaner and disinfectant, compatible with all the most common dental surgery surfaces. This wide spectrum microbiocide cuts through contaminants, leaving a

physically clean and disinfected surface in a single operation and has proven efficacy against mycobacteria, including TB and enveloped viruses such as Hepatitis B and C.

TAKE HEED

The property experts at Goodman Grant Solicitors understand that practice owners and principals should be aware of restrictive covenants when undertaking property purchases, expansions or a change of use.

Restrictive covenants are frequently overlooked. But, if there is a covenant on a lease that restricts or controls activities, practices could run into costly and inconvenient problems if found to be in breach.

Goodman Grant Solicitors is one of

the countries foremost law firms providing specialist legal services to the dental profession, and has experts in every field relating to the industry, from acquisitions to intellectual property.
