

## High-strength cement

DIAMOND Core provides the dentist with a number of advantages over traditional core build-up materials.

It is the strongest product in the Diamond range, and contains high-strength (over 200 MPa>24hr) core build-up material, to resist masticatory and parafunctional forces, and for the long-term success of the structure.

In a busy practice, it can sometimes be difficult to distinguish tooth from core during preparation. Diamond Core is easy to place and resolves this issue with a distinctive pale blue shade. It does not suffer from shrinkage or expansion, but adheres to dentine and enamel while releasing fluoride to help strengthen the tooth. It has the advantage of being radiopaque and has a rapid snap set.

Diamond Core is part of the Kemdent Diamond range, which provides dentists with clinically proven glass polyphosphonate cement. To find out more about the Diamond range, contact the team today. ■

## More choice with summer offers

MC DENTAL offers a summertime special with great prices on Midmark products. These include an amazing delivery system that outperforms all the major players in this sector, an imaging system that leads the way in the US, and an autoclave that's the perfect sterilising solution for most practices.

The Elevance dental chair has an outstanding build quality, lower maintenance costs, and many more practical and ergonomic design features. Price on application.

Progeny PREVA imaging system offers the image quality you'd expect from a market leader, and features an ultra-stable arm in four different lengths, to allow placement wherever is most convenient and practical. From only £1,995 plus vat.

The Midmark Newmed Class B, S and N sterilisers have all been really well designed, are well made, reliable and very economical to maintain, offering a low ongoing cost of ownership. Available from only £3,700 plus vat.

Offers close on 31 August and are featured on the new MC Dental website. ■

## Variation without compromising principles

DR GARETH Hargreaves from Victoria Street Dental Practice in Cheshire was among the very first professionals to complete the hands-on training for the ClearSmile Brace, delivered by IAS Academy.

He said: "I was already providing the Inman Aligner, so the ClearSmile Brace was a logical step towards offering a fixed system that would allow well-controlled 3D tooth movement, while maintaining all the same diagnostic and treatment planning principles I knew.

"I like the IAS Academy's approach as it is firmly based upon correct diagnosis, treatment planning, and informed consent, and the good support available offers peace of mind in an area of dentistry that is not without its detractors and increasing

litigation.

"I thought the content, format and quality of the training course were all good. I left confident with my new skills and only weeks later, I am looking to bond up and start two cases in-practice.

"I would certainly recommend the ClearSmile Brace and training course from IAS Academy to other GDPs."

For information on the IAS Academy, contact the team today. ■

## Faster, easier and safer

FILHOL Dental products are design-engineered to be faster, easier and safer to use. They are made of 99.8 per cent titanium, bio-compatible, and are compatible with all dental materials.

The dentine retention pin, Filpin, can be easily bent to suit the restoration without breaking it or the tooth. A unique thread design maximises retention strength without causing internal stresses.

The root canal post, Filpost, preserves a healthier tooth structure and is stronger in use due to its passive interlocking system.

It can be easily customised to suit the canal without risk of fracture, enabling easy insertion of multiple posts into converging canals.

No drilling is required during placement due to the 'Universal Groover', which minimises dentine removal and creates a passive interlock that strengthens retention.

The Filpin pin bender is excellent for use with Filpin, for added precision.

The Filol products are available from your Dental Dealer.

Contact Filhol Dental today. ■

## Combining for a stronger product

DENTSPLY have merged two of its strongest matrix systems, the Palodent Plus and Triodent V3, under the new name, Palodent V3.

For dentists placing Class II restorations, Palodent V3 is the sectional matrix system of choice for predictable and accurate contacts, and can be used with any restorative material, including composites, amalgams, wax patterns, or temporaries.

The new system retains all the familiar benefits that dentists expect when striving

for natural contours and profiles, including predictable accurate contacts, tight gingival seal, minimised flash and finishing, and micro-thin, non-stick EZ Coat for effortless matrix placement and removal.

Palodent V3 is the new name in effective design, technology, and patient comfort, to help dentists overcome the challenges that come with Class II restorations.

To find out more about Palodent V3, contact DENTSPLY today. ■

## Acteon and EuroPerio8

EUROPERIO8 made its visit to London this year and its platinum sponsor, Acteon, presented lectures on Thursday and Saturday.

Dr Amit Patel and Donna Schembri explored the concept of 'Seeing the Unseen - Utilising Fluorescent Technology for Optimal Periodontal Care', whereas Ziv Mazor's lecture was titled 'Minimal Invasive Surgery Utilising Piezo Surgical Device- Optimising Biological and Functional Outcome in the Posterior Maxilla'.

The lectures focused on improving patient understanding, in order to empower self-care, and using technology to see better and treat faster.

Products mentioned as examples for the effective removal of plaque included the Newtron P5xs ultrasonic generator, the Air n Go easy airpolisher and Soprocure, which use photonics technologies.

Find out more about innovations available from Acteon by calling the team today. ■
