

Endodontics, pins and posts

Pioneers in files

Sendoline

The Swedish company, Sendoline, founded in 1917 is a world-leading manufacturer of endodontics files. Pioneering in its field, Sendoline has developed a number of key products that have shaped the endodontics landscape to what it is today.

Complete solution

These include the famous H-file, the universal S-file and its S5 rotary system.

S5 is a complete endodontics solution for treating any tooth, quickly, efficiently and cost effectively with highly predictable outcomes every time. The system incorporates five nickel titanium instruments, with most cases needing just two or three.

There is a matching cordless endodontics motor with pre-set torque control, and once shaped and cleaned, the canals can be filled with fitting, matching GP points. Its apex locator completes the system, giving clinicians confidence their root canal treatments will be accurate every time.

Referring for endodontics

Endocare

Endocare strives to be more than just the clinic dental professionals send patients to for the treatments they can't provide. It aims to be an integral part of their team.

Endocare ensures dental professionals are kept up-to-date with every facet of their patient's time spent with the referring clinic, so they can be assured of the quality of

treatment their patients are receiving. Whether by email or over the phone, Endocare aims to always keep the dental professional involved.

Not one or two but three!

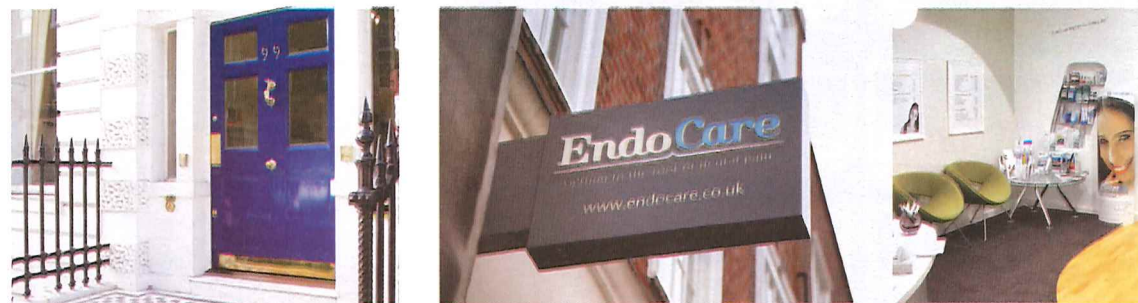

This way, endocare can create a more homogenous service to save dental professionals and Endocare time, but it means the patient is never left in doubt they are receiving the best care.

With three state-of-the-art facilities, an experienced team and the expertise to manage even the most complicated endodontics treatments, Endocare can be the solution to the profession's referral needs.
