

## ZOOM INTO MULTIPLE MAGNIFICATIONS

### ORASCOPTIC

Eyezoom is Orasoptic's first and only loupe to offer multiple magnification powers ranging 3x to 5x. The special design assists healthcare professionals in viewing an operating site from multiple perspectives while conforming to fit the custom preference of every wearer. Whether an endodontist performing a procedure at 5x, or a cosmetic dentist applying a veneer at 3x, the loupe maintains a consistent working distance at each magnification power level. Through collaborative engineering with Konica

Minolta, the patent-pending Eyezoom technology provides exceptional edge-to-edge clarity and a high-definition resolution. Zoom in and take a closer look at [Orasoptic.com/PVD](http://Orasoptic.com/PVD).

## INTEGRATING YOUR ENDO FILES

### SIRONA DENTAL SYSTEMS

Teneo, a premium treatment centre from Sirona, offers exceptional comfort and optimal workflow support for all treatment procedures. Its many integrated functions have now been expanded to include innovative features, particularly for endodontics.

Treatment centres by Sirona are renowned for optimum comfort and maximum treatment efficiency. To optimise treatment workflows, the Teneo treatment centre includes many integrated functions, which normally require additional devices, a foot control or special treatment rooms.

The Teneo is equipped with features for endodontics and implant dentistry to provide an optimised, ergonomic workflow. For example, the endodontics function includes a comprehensive file library and can accept the addition of an apex locator.

#### YOUR FILE LIBRARY

The reciprocal file systems from VDW (Reciproc) and Dentsply Maillefer (Waveone) are integrated in the treatment centre's file library. This new function is also displayed in the Teneo user interface and can be easily controlled with

the centre foot control. It is no longer necessary to spend valuable time setting up and cleaning another tabletop unit. This helps to make the treatment workflow efficient and smooth.

The workflow is further enhanced with a handy, hygienic holder for the apex locator right at the dentist element.

The new endodontics contra-angle handpiece with LED light can optionally be included with the treatment centre. This enables improved visibility of the treatment area and further enhances operator confidence.

## AID RETENTION OF RESTORATION

### FILHOL

Filpost aids in the retention of restorations by root post and core build-up.

It has been engineered to be easier to place, even in difficult cases in a faster and safer manner. There is more preserving of healthy

tooth structure and it is stronger in use via its special passive 'interlocking' system.

Filpost is 99.8% pure titanium, biocompatible and compatible with all dental materials. It will not corrode. It can be customised to suit the canal without risk of fracture, enabling easy insertion of multiple posts into converging canals. No drilling is required during placement thus avoiding the risk of perforation. Its anatomical shape minimises dentine removal.

Retention grooves along the post, working together with retention grooves formed within the canal surface by the special universal groove, create a special passive interlock that strengthens retention.
